STAIRWELL

Stairwell macOS Forwarder 1.6.12 Release Notes

Version: 1.6.12.1379
Date: Sep 23, 2025

New Features

FOR-732: Mac forwarder should scan external drives

The MacOS version of the Stairwell forwarder did not scan attached drives other than the system boot drive during backscan. This did not affect real-time scanning of files written to or executed from these drives.

The new version now *does include* attached (and mounted) filesystems, including removable devices like USB thumb drives, but *does not include* mounted network drives.

If there are specific drives you don't want scanned, you can create exclusion rules in the policy for your environment.
