

# Mac Forwarder

## Release Notes

Version Number: **1.3.2**

Release Date: 7/19/2023

The Stairwell File Forwarder is a lightweight service used to monitor files on the assets of which it is installed. Following the installation, a breach assessment is conducted. The breach assessment searches for executable files on the applicable drives. After the original breach assessment, the forwarder will continue to monitor the asset for new executable files. When updating forwarder versions beach assessment does not run, if it was successful during the initial installation.

## What's New

- **Mac policy support**
- **Improved file collection for archive extraction**
- **Reduced CPU utilization**
  - Evaluation of exclusions - Forwarder CPU utilization is substantially reduced for cases where many files are created in an excluded directory tree.
  - Processing overhead reduction - Allows for minimal overhead while processing a high volume of real time events

## Known Issues

1. No known Issues at this time

## Bug Fixes

1. FOR-2 Forwarder stalling during full disk scan
2. FOR-12 Optimize FilesBuffer.take()
