Stairwell Windows Forwarder 1.6.9 Release Notes

Version: 1.6.9.1
Date: Feb 24, 2025

1.6.9 includes all of the features of 1.6.8 and 1.6.6, as well as an additional bug fix, described below.

[1.6.8 Release Notes](#)

[1.6.6 Release Notes](#)

Bug Fixes

- On busy systems, when processing files with Mark of the Web (Zone.Identifier) information, it is possible for the realtime scanner to get into a state where it can miss events until the service is restarted.

  If this occurs, all other functionality continues as normal, including console updates. Backscan is not affected by this issue. Similarly, kerneless mode is not affected by this issue, since realtime scanning is already disabled.

  (FOR-570)

Known Issues

- When the driver is disabled, the forwarder still attempts to sight files when they are executed. File sightings may be missed on volumes added after the forwarder starts, for example, on removable USB. In some cases, the OS provides the forwarder an unexpected path, and the forwarder skips the file. (FOR-521)
- We recommend installing to the default directory. If you install to a custom directory and upgrade, the upgraded version will be installed to the default directory (FOR-258)
- Updating from 1.4.x to this release is not supported. You can either update to 1.5.1 first (which requires a reboot to succeed) or you can manually uninstall 1.4.x and then install this release (FOR-357)
